

Lapro-Flex[®]

LAPAROSCOPIC ARTICULATING RETRACTORS

- Reusable articulating technology used to retract organs and structures in laparoscopic procedures
- Finger-styled model is ideal for esophageal retraction
- Innovative tip design ensures minimal space required inside the abdomen to form the retractor shape
- Actuating knob quickly forms shape completely
- Atraumatic tip and shaft
- Fully cleanable despite small lumen
- Full range of tip configurations

ATRAUMATIC • CLEANABLE • DURABLE

Lapro-Flex®

LAPAROSCOPIC ARTICULATING RETRACTORS

Mediflex's Lapro-Flex® self-forming articulating retractors allow for convenient and atraumatic retraction of organs and tissues in the peritoneal space. These retractors can be introduced through a 5mm cannula and articulated to their shape by rotating a knob on the handle. They are available in several different configurations including right angle, triangular and angled triangular.

Twin FlexArm™ Plus System (99055-QCLR) with Quick-Grip Tip (72162) and Stainless Steel Tip (69706) (tips and instruments not included)

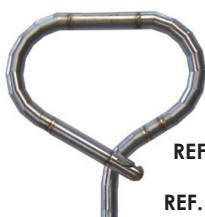

Lapro-Flex® shown in use with StrongArm™ Top Mount System (Ref. No. 73000-TM) with Stainless Steel Tip (Ref. No. 69706)
